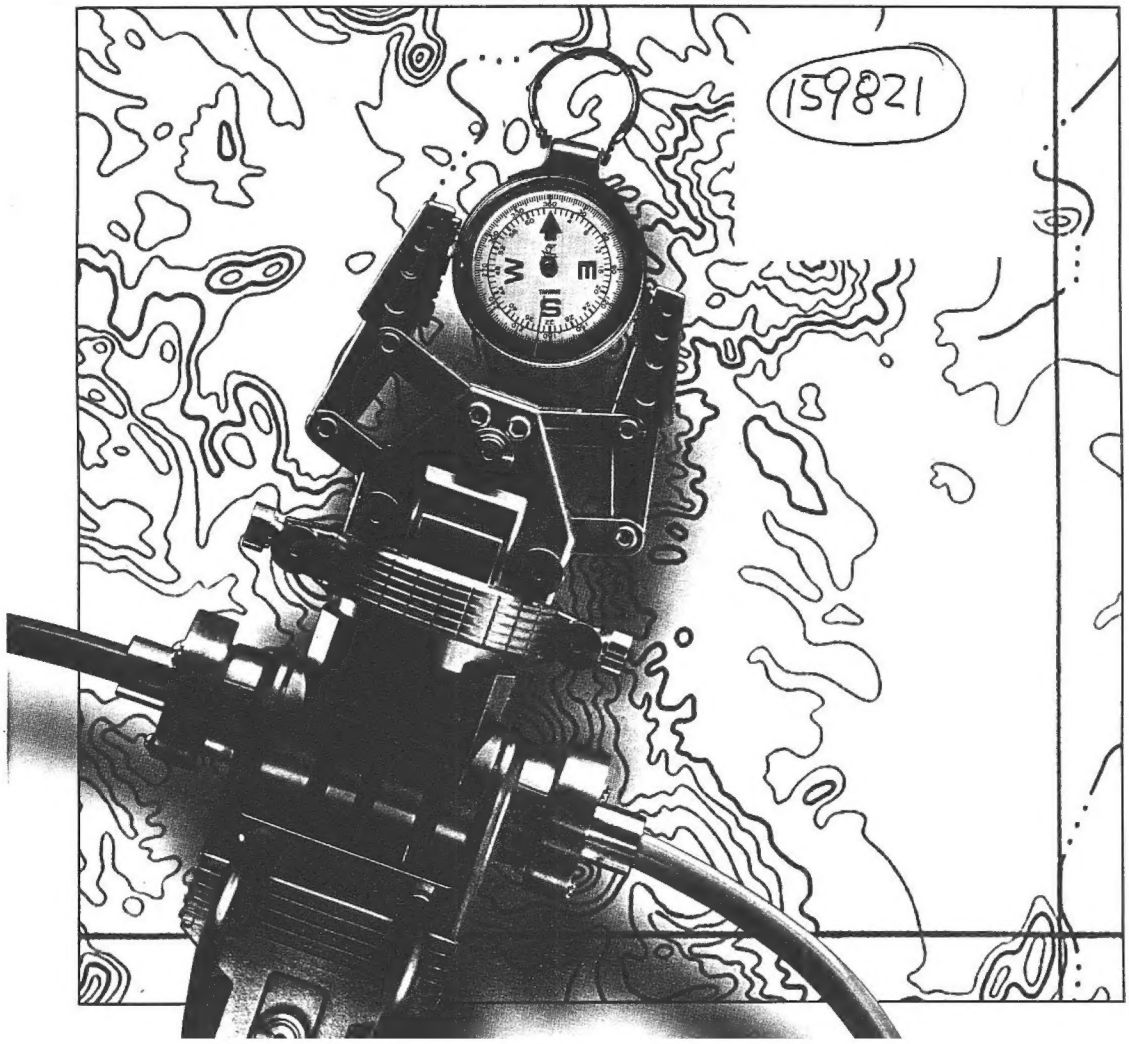
Jameco Part number 159821

THE PERSONAL ROBOT

NAVIGATOR

MERL K. MILLER **NELSON WINKLESS** **JOE BOSWORTH**



Jameco Part number 159821

TABLE OF CONTENTS

INTRODUCTION viii

CHAPTER ONE: The Robotmaster .....
In the beginning 1
How to navigate this book 4
How to install the software 5
Methodology 7
Commentary 9
Conclusion 12

CHAPTER TWO: Personal Robots: General Concepts .....
Nobody here but us practical people 15
What are we striving for? 16
Examples to learn from 18

The next step 21
A broader scale 24
An anticipation 26
Conclusion 28
But, good meat and potatoes 29

CHAPTER THREE: Personal Robot Navigation .....
A navigation application 35
Personal robot architecture 37
A practical approach to navigation 38
The computer and navigation 39
Software and navigation 40
Software in levels 41
More on levels 42
Navigation sensors 46
The mobile base 46
Model 49
Conclusion 50

CHAPTER FOUR: Navigation and Planning Control .....
Understanding robot navigation 53
Set up a map of the room or rooms 54
Design the map and set up all of your standard path nodes 56
Path nodes and segments 59
Plan and input the destination 62
Execute, track and control 62
Conclusion 68

CHAPTER FIVE: Dead Reckoning and Referencing .....
Introduction 71
Dead-reckoning navigation 73
Compass 78

Jameco Part number 159821

Referencing 81
Beacons 82
Conclusion 85

CHAPTER SIX: Sonar and Obstacle Avoidance .....
Introduction 89
Control systems 90
How sonar works 92
Navigation and obstacle avoidance 98
Interpretation of data 101
An alternative 103
Conclusion 104

CHAPTER SEVEN: I Reason; Therefore I Are .....
Getting started with RoboNav™ 107
Mastering the demo 108
Beyond the demo 114
Build your own simulation 118
Placing furniture 123
Placing nodes 125
The design tables 126
Fun stuff 132
Summary 135

CHAPTER EIGHT: RoboNav Help .....
Overview 139
How to use help 140
Topics 141
About/exit 143
Room design 144
Preferences 155
Simulate 162

Jameco Part number 159821

GLOSSARY 172
INDEX 184
BIBLIOGRAPHY 190
TRINITY CONTEST 197
SMART ROBOT NETWORK 201
PRONAV LAB KIT 203

Jameco Part number 159821

INDEX

Acoustic Cone 102

Appliance 2, 12, 42, 173

APR 7-8, 40, 50, 80

Architecture 4, 34, 37, 39, 181

ARE 8, 10, 108

Automatic Path Calculation 107, 174

Autonomous Personal Robot 7, 38-39, 45-46, 50, 90, 174

Autonomous Robot Entity 10-11, 174

Beacon 4, 8, 46, 54, 60, 63-66, 68, 82-84, 94, 98, 101-102, 104, 111-112, 141, 158, 162-163, 173-174, 177, 179, 183

Beacon Position Finding 104, 177

Buttons 129-130, 153, 162

Cat 11, 21, 32, 68, 77, 91, 98, 115-117, 122, 133-134, 142, 144, 164-167, 175, 180

Checkpoint 46, 63-66, 114, 132-134, 141, 156, 163, 168, 175, 177, 183

Jameco Part number 159821

Checkpoint Chapter 156

Checkpoints 63-64, 135, 158, 163, 169, 173

Cockroach 16

Compass 4, 9, 39, 41, 43, 46, 54-55, 63, 65-66, 72-73, 78-82, 90, 110-111, 115, 132, 141, 158, 162-163, 167-168, 172, 175-177, 189, 192

Computer 1-2, 5, 12, 23, 25-26, 37-39, 44, 49-50, 55, 61, 77, 109, 164, 172-173, 179-181, 189, 191-192

Counts Per Wheel Turn 133-134, 141, 156, 161, 163

Dead Reckoning 8, 41, 46, 66, 68-73, 75, 77-79, 81, 83, 85, 89, 133, 163, 175, 177, 193

Demo 7, 84, 108-111, 113-114, 119, 131, 141, 145, 163, 175

Detach 122-123, 141, 145

Doppler Shift 92

Drag and Drop 121, 142, 145-146

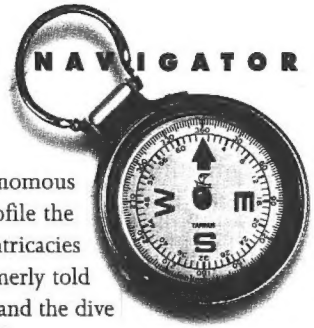
THE PERSONAL ROBOT NAVIGATOR



The Personal Robot Navigator unveils the soul of autonomous robotics. Merl, Nels and Joe trace the future, profile the possibilities, show the technical and logistical intricacies of autonomous robot navigation, and share stories formerly told only in the back rooms of littered software laboratories and the dive bars of Portland, Albuquerque, and Denver. The art of software engineering as it pertains to robot navigation compresses the action, the fear, the pain, and the glory of navigating through cluttered rooms full of obstacles and pets. As the authors note, "Robot navigation is the essential first skill for autonomous robots. Once navigation is mastered, the autonomous robot revolution begins in earnest."

"Personal Robot Navigator presents a good discussion of how the technology operates in the real world where your expectations are not always met. Objects are not always in the same place, and sensors are not always accurate, but a good design can allow the robot to complete its tasks."

PAUL MALENFANT, Software Engineer
Data General Corporation

"I learned that the robot can use nodes to navigate. I thought it would be like Rosie in the Jetsons, but it wasn't. But then, maybe Rosie is further in the future. Making the robot go crazy is fun. I did that by increasing the speed to the max. The software is easy to learn and fun to use. It makes learning about robots fun."

STEVEN LEAVITT, Fifth Grade
Kingston Elementary School
Virginia Beach, Virginia
